Delevan
Digital Services

Providing world class, client focused digital investigations

DELEVAN DIGITAL SERVICES

eDiscovery Services Overview

Delevan Digital Services provides professional eDiscovery services with a focus on addressing our client's needs through expert consultation rather than a reliance on technical solutions.

Services Overview

One Size Does Not Fit All
The eDiscovery services industry experiences ongoing innovation, providing a wide variety of novel technical solutions that can be brought to bear on a document review effort. Delevan Digital Services pairs the most appropriate solution with the specific needs of our clients in an effort to drive efficiency and reduce the overall cost of the document review effort. We will never offer you a solution that we don't believe is the right one. We work with multiple review platforms and utilize a wide variety of technical solutions in an effort to ensure our clients receive the best value for service.

Advanced Analytics and AI
Through the application of advanced analytical techniques inclusive of artificial intelligence and computer-assisted review within an ECA environment, Delevan Digital Services provides significant cost-saving solutions before the majority of the data is loaded to a review database. Delevan Digital Services' continuous active learning (CAL) provides the most advanced TAR solution available while enabling a review team to commence review on day one. Our professionals handle the details to allow the legal team to focus on the merits of the case and gain access to highly relevant documents as swiftly as possible.

Trusted eDiscovery Partners
Delevan Digital Services understands the importance of meeting critical deadlines and providing accurate information to the legal team throughout the effort. Our professionals have worked on some of the most sensitive investigations and litigations over the past 25 years. We anticipate the needs of our clients and ensure the process runs smoothly and efficiently so that the legal teams we collaborate with and our clients receive the highest level of value possible.

Utilizing Trusted and Proven Technology
Delevan Digital Services licenses industry-standard and proven technology from CSDisco, Relativity, Law, Access Data, and others.

Client Driven Support

Remote Collections
Our team can perform forensic data collections over the internet to limit travel-related expenses and time delays associated with collection scheduling. These efforts are performed in a forensic manner so that we can attest to the process and veracity of the evidence.

Smart Review Batching
We employ deep learning, convolutional neural network technology to provide relevance predictions. When running a structured review, AI combined with dynamic batching ensures that each new batch will have documents with the highest possible scores amongst the remaining, unreviewed documents.

Native Excel Redactions
Production costs continue to rise due to increased data volumes. Our native Excel redaction tool allows our clients to perform redactions within Excel files and produce them natively without having to convert the documents to TIFF. This speeds up the production process, offers a more consumable file format for the receiving party, and saves our clients' money.
